

MySQL Practice Worksheet

Sample Table: student			
sno	name	marks	address
1	Anil	80	Chennai
2	Sunil	70	Delhi
3	Bhavani	90	Chennai
4	Arun	50	Delhi

Practice Questions

1. Relational Operators (=, != or <>, >, <, >=, <=)

- Question 1: Write a MySQL query to list all students whose marks are greater than or equal to 70.
- Question 2: Write a query to find students whose address is not equal to (<>) 'Delhi'.

2. Logical Operators (AND, OR, NOT)

- Question 3: Write a query to find students who live in 'Chennai' AND have marks greater than 80.
- Question 4: Write a query to find students who live in 'Delhi' OR have marks less than 60.
- Question 5: Write a query using the NOT operator to find all students who do not live in 'Chennai'.

3. Range-Based Conditions (BETWEEN)

- Question 6: Write a query to retrieve students whose marks are BETWEEN 60 and 90 (inclusive).

4. Using Column Aliases (AS)

- Question 7: Write a query to display the name and marks of all students, but rename the marks column heading to student_score using an alias.

5. Arithmetic Operators (+, -, *, /)

- Question 8: Write a query to display the name and calculate a new column showing what each student's marks would be if a grace mark of 5 is added (marks + 5). Give this new column the alias total_with_grace.
- Question 9: Write a query to display the name and show half of each student's marks (marks / 2).
